Beat the Heat

Summer is rapidly approaching and we all know that means

the mercury will soon be soaring into the triple digits. That doesn't stop us die hard Texans from riding, however, we need to make sure we are prepared for hot weather riding.

1. Start hydrating days before the ride.
2. Carry water and a sports drink on the ride and drink often. The sports drink is to replace electrolytes lost by sweating.
4. Plan your ride for earlier in the day and return before mid-afternoon when the temps really soar.
5. Recognize the warning signs of heat exhaustion and heat stroke. "Tap out" if you have any of the following symptoms

1. Headaches, dizziness, nausea, momentary fainting
2. Cramps
3. Tiredness, weakness
4. Profuse sweating
5. Pale, clammy skin

These are all signs of heat exhaustion. Pull over and find a cool place to rest before these symptoms turn into heat stroke. Do not "tough it out" until the next rest stop.
